Charles, Aaron. "How Electronics Affect Lives." *Your Business*, 21 Nov. 2017,

<https://yourbusiness.azcentral.com/electronics-negatively-affect-children-20727.html>

Summary

This Article Talks About:

- How electronics give our brains a dopamine effect called “dopamine squirt”
- The way we interact with electronics in our daily lives can be categorized into four effects: practical, psychological, physical, and financial effects.
- The practical effect is that electronics help make our lives more easier while it also can make us disconnected from seeing our surroundings.
- The psychological effect can cause children to have psychological problems while also being able to help them with it
- The physical effects is that electronics make you feel more disconnected with the outside while at the same time could encourage you to exercise and go outside
- The financial effect is that electronics are expensive tools to buy while at the same time can help us improve at budgeting to buy it.

Why Is This Story Important?

The reason why this story important is because:

- It helps society get a better understanding on what electronics does to us.
- It gives society insight on the cons that electronics have on us and gives us something to improve on.
- It gives the business side of the world insight about techniques they should use to help sell their products
- It gives the business side of the world information about what electronics do to its customers and what they should do to help and improve their products to sell more.
