Cardboard Computer Project

By: Rainier Jorge Jorda & Gian Gutierrez
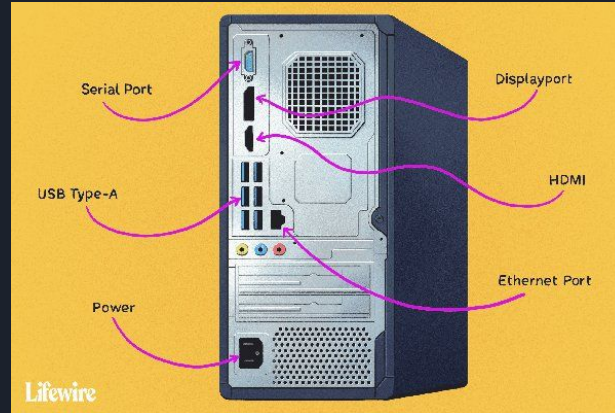

Model Name & Concept Images
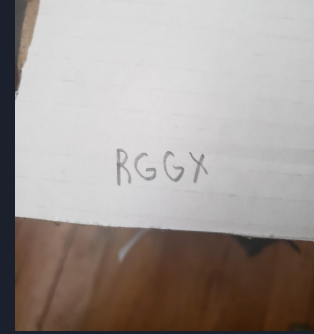

Model Name

The model that you can find on RGGCX. This name basically represents 'Rain & Gian Gaming Computer 10.

Concept Images

The images that these cardboard computers were inspired by are these images that can be seen down below.

Motherboard, CPU & RAM

The motherboard that could be found in the your pc is the one of the generations of motherboard. It greatly allows both your graphics card and to perform much greater than ever before. With the multiple expansions slots and new DDR4 RAM sticks that is implemented, allows it to carry large amounts of RAM through your computer. It's CPU is also one of the new Intel Core i9, allowing for a better performance overall..

Permanent Storage

This permanent storage is one of the new NAS HDD Drive. The amount of storage it has is about 8TB of disk storage meaning that you could download a large amount of things without it majorly affecting the performance of your pc.

Keyboard and Mouse

The keyboard and mouse provided by the pc are all brand new equipment. The mouse is one of the newest and reliable gaming mouse which is the G502 Hero Gaming Mouse. The keyboard on the other hand is the one of the new, one of the kind cardboard keyboard which provides for very fast input making it one of the most reliable keyboard of all time.
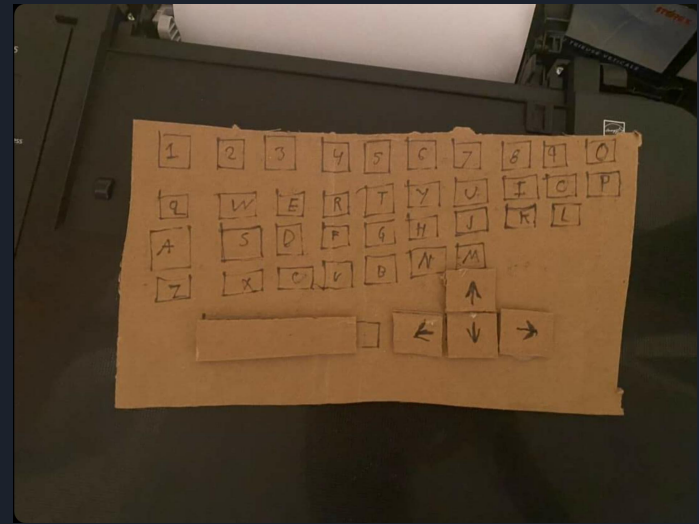

Additional Input Devices

The additional input device that we implemented into our pc is by adding a FDD Drive. This drive will allow you to save even more kinds of data however you want. This pc will have a large amount of storage thus causing you to not have to worry about having your storage be ever filled up.
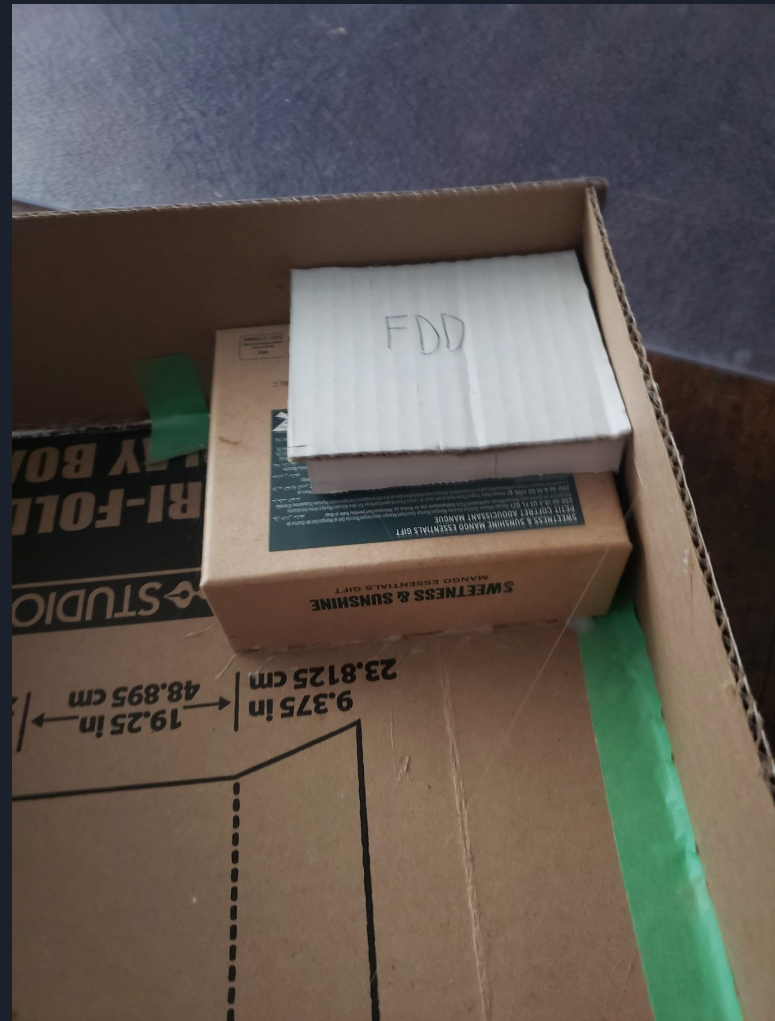

Monitor

Our Monitor is one of the newest Dell monitor that they could offer. It is the Dell 27 Gaming Monitor, allowing for you to have at least a 144HZ refresh rate, amazing quality of both videos and games, and providing a stutter-free gameplay experience.
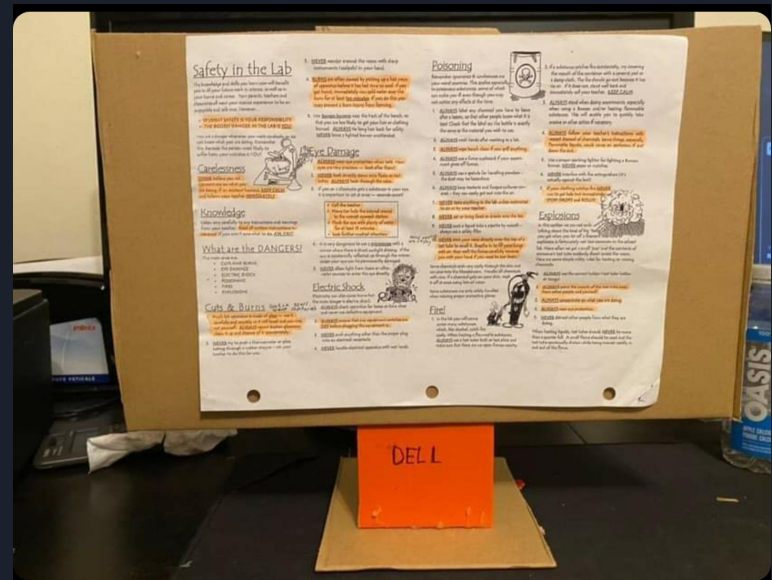

Ports and Connectors

There are many different types of ports and connectors in to which our pc provides. We have the an RCA connector which provides audio incase you want to use an very old technology. We have the Ethernet port which allows the pc to gain access to the internet. We have the HDMI cable which allows for high definition videos. We got many USB-Type A that allows for multiple input devices. We got the Power port which allows for the PC to turn on. The Display port is implemented if you have the use for multiple monitors. Lastly, we have the Serial port which allows you to connect to some of the oldest printers.

Final Summary

The reason as to why I believe our PC to be eye catching is due to the water theme we were trying to go for with our pc. We used something based on water and anime and thus showing that some of our target audience are those who like both water and anime. The anime shown on it is also one of the most popular anime, thus giving us a large audience who might be interested in the pc. Our pc durable due to how flexible cardboard is, allowing for it to be both lightweight and durable to falls due to it not causing any damage to itself from falls. Overall, our pc is key-points is that many people will like to have the pc due to how lightweight it is and the anime pictures on its side.
